

NATURAL RESOURCE MANAGEMENT

WolfPeak's Natural Resource Management offerings are solutions based and essential at a time when Australia's natural resources are coming under increased pressure as a result of factors such as climate change and water scarcity. We consult on a range of issues to help both councils and private land owners protect and improve on the health of their environmental assets. The protection of our natural resources is essential in ensuring land and biodiversity health as well as long term productivity and growth.

Biodiversity Stewardship

The Biodiversity Offsets Scheme creates a transparent, consistent and scientifically based approach to biodiversity assessment and offsetting for all types of development that are likely to have a significant impact on biodiversity. It also establishes biodiversity stewardship agreements, which are voluntary in-perpetuity agreements entered into by landholders, to secure offset sites.

As part of WolfPeak's NRM offering, we can assist in the following areas:

- Strategic advice and assessment reports on Biodiversity Offsetting on land asset portfolios
- Connect credit purchasers with credit providers in regional NSW
- Assist with the project management, reporting and on-ground management of your stewardship site

Ecology Services

- Development of Local Environmental Studies for local government rezoning initiatives
- Species specific studies and reporting such as koala habitat
- Threatened species assessments
- Strategic invasive weed assessment and control works
- Habitat restoration planning and on ground works

Riparian, Coast and Estuary Management

- Preparation of coastal management studies and plans
- Delivery of on-ground works under the new NSW coastal management reforms
- Waterway health and planning assessments
- Acid Sulfate Soils
- Riverbank and riparian restoration work
- Soil erosion mitigation works
- Coastal erosion works
